Education

University of Warwick
Upper Second Class (2:1)

BEng Systems Engineering
10/2021 - 06/2025

Technical Skills

Languages: Java, Python, Golang, TypeScript, C++

Technologies: MySQL, Kafka, Docker, Spring, React, Pandas, Scikit-learn, TensorFlow

Work Experience

HubSpot

06/2025 - Present

Software Engineer

- Reduced cross-region request latency by 50% by migrating a critical playlist service from a single-region to a multi-region architecture as sole backend owner executing a zero-downtime distributed ID migration, REST-to-RPC transition, and Kafka-based synchronisation to ensure data consistency across all regions.
- Built a data validation framework to verify correctness of a 1.7B row user progress migration across regions, creating a 4-module evaluation suite with a field-level comparator engine and monitoring dashboards achieving a 99.95% match rate across 168K+ compared records and surfacing data bugs before production cutover.
- Built an AI-powered playlist generation feature enabling trainers to create personalised learning paths from natural language prompts designing a content search RPC endpoint with filtering across content type, language, difficulty, and business objective, including a parallel async search strategy to handle mixed-content edge cases.

Morgan Stanley

06/2024 - 08/2024

Software Engineer Intern

- Developed a Non-Production Environment Dashboard using Angular, Java/Spring Boot APIs, enhancing observability for 450+ developers across 40+ teams.
- Integrated Jenkins jobs to automate periodic data retrieval from inhouse container system, ensuring real-time status updates across DEV, UAT, and QA environments

Hewlett Packard Enterprise

07/2023 - 06/2024

Software Engineer Intern

- Designed and implemented the update announcement feature with a REST API endpoint using Golang, achieving 80% test coverage and increasing system efficiency
- Enhanced deployment reliability through the creation of Docker images for functional tests and automation of build and push processes with Jenkins.
- Engineered the publish announcement feature, integrating a Golang-based gRPC server adapter with over 80% test coverage, significantly improving system stability and scalability

Ford Motor Company

07/2022 - 09/2022

Software Engineer Intern

- Architected a high-performance 4DX racing game for Ford's Sync System using Unity, C#, Python, and C/C++, achieving a 60% reduction in latency through low-level programming optimizations
- Implemented advanced graphics rendering techniques, resulting in a 40% improvement in frame rates and enhancing overall user experience

Projects

Agentic Bidding Platform | *Golang, Google ADK, PostgreSQL, RabbitMQ, Redis, React* | Website

02/2026 - Present

- Engineered a distributed, microservices-based AI bidding platform using Go, consisting of dedicated services for auctions, bidding, and autonomous bot agents
- Architected an autonomous bot agent service that monitors real-time auction snapshots and executes strategic bids based on personality-specific logic and remaining budget

AI Code Reviewer | *FastAPI, Pydantic, Pinecone, Railway, Langchain, OpenAPI, Github, Redis* | Github

11/2025 - 01/2026

- Engineered an event-driven code review system with FastAPI and GitHub webhooks, integrating a tool calling agent to autonomously analyse code changes and provide pull request suggestions.
- Integrated a vector database solution using Pinecone and OpenAI embeddings to create searchable knowledge base of coding standards, enabling semantic search across multiple programming language

Kingdom Code | *Kotlin, Spring Boot, OpenAI API, Redis, PostgreSQL* | GitHub

10/2025

- Built self-improving AI content generation system by integrating OpenAI API with automated feedback loop, enabling prompt regeneration based on user sentiment and reducing poor-quality AI responses across content types
- Enhanced Bible passage retrieval reliability by architecting ReadServiceV2 with Bolls.Life API integration and comprehensive caching strategy, ensuring consistent scripture content delivery and improved performance platform-wide

Interests

- Basketball** - Competed nationally as a member of Bracknell Cobra's Division 3 National Team; actively involved with Woodley Basketball Club.
- Reading** - Passionate reader focused on Software Engineering, Psychology, and Theology; currently exploring theological insights through 'The Sinfulness of Sin.'
